[DOWNLOAD TECHNICAL DATA SHEET]

PRODUCTS

IPS insulation product portfolio

IPS Middle East develops and supplies a focused range of industrial insulation products designed for demanding environments and critical infrastructure across the GCC.

01 — Cellular Glass (Foam Glass)

Rigid, closed-cell, noncombustible insulation. Zero water absorption, non-combustible, rated from -196°C to +450°C. For pipelines, pressure vessels, and cryogenic systems.

02 — Mineral Wool

High-density fire-resistant thermal and acoustic insulation for power plants, petrochemical facilities, and industrial construction.

03 — Stainless Steel Accessories

AISI 304/316 fasteners, supports, and banding systems with high corrosion resistance for long-term performance on onshore and offshore facilities.

04 — Coatings & Jacketing

Protective mastics, vapor barriers, and metal claddings for complete, fully weatherproofed insulation systems.

ENGINEERING SERVICES

Engineering Support Across the Full Project Lifecycle

Our team works alongside EPC contractors and plant operators — from early-stage design through to site installation.

Design & Calculation

Material selection

Specification Assistance

EPC project support

Technical consultation Service

INDUSTRIES

Our products and services are designed for

01 — Oil & Gas Operators

Insulation systems engineered for harsh oil & gas environments across the GCC.
Designed for durability, safety, and reduced maintenance.

- Pipelines, tanks, vessels, process equipment
- Protection against water ingress and CUI
- Suitable for onshore and offshore facilities

02 — Industrial Construction

Durable systems for continuous industrial operation.
Engineered for energy efficiency and compliance.

- Refineries and petrochemical plants
- Chemical and process facilities
- Long service life with minimal maintenance

03 — LNG & Cryogenic Applications

Reliable insulation for cryogenic systems operating down to -196°C .
Ensures vapor control and long-term thermal stability.

- LNG terminals and storage tanks
- Cryogenic pipelines and valves
- Zero water absorption, closed-cell structure

04 — Power Generation

Thermal insulation solutions for efficient and safe power plants.
Supports heat control and equipment protection.

- Steam and hot water pipelines
- Boilers, turbines, recovery systems
- Fire safety and heat loss reduction

05 — Infrastructure

Insulation systems for large-scale utility and infrastructure projects.
Designed for extreme climate performance.

- District cooling and utility networks
- Moisture and humidity resistance
- Reliable long-term thermal protection

STANDARDS

Calculations performed in accordance with applicable standards:
ISO · ASTM · EN (European Standards)

WHY CHOOSE IPS

Built for the region

Manufacturing and engineering based in Dubai South means shorter lead times, local technical support, and products pre-engineered to GCC climate and project conditions.

Stock and production in Dubai — GCC-wide delivery with no import lead times
International certification

Full compliance with ASTM / EN / international standards

30+ years of engineering expertise. Proven track record in oil & gas, LNG, and power generation insulation

Complete product range. One supplier for all insulation materials and system accessories

PERFORMANCE METRICS

Proven Capabilities. Measurable Results.

< 24h — Response time

30+ — Years of engineering expertise

6 — GCC countries served

-196°C to +450°C — Certified operating range

GET A QUOTE

Address: Building A2, Floor 4, Office 32, Dubai South, United Arab Emirates

FOOTER TAGLINE

Your trusted partner in insulation manufacturing and engineering — delivering certified performance, precision, and reliability across the GCC.

HERO

Built on expertise. Manufactured locally. Trusted regionally.

Since 2021, IPS Middle East has operated as the UAE's dedicated manufacturer of cellular glass insulation — combining 30 years of accumulated engineering knowledge with production in Dubai South to serve oil & gas, LNG, and power generation projects across the GCC.

PERFORMANCE METRICS

Proven Capabilities. Measurable Results.

< 24h — Response time

30+ — Years of engineering expertise

6 — GCC countries served

-196°C to +450°C — Certified operating range

MISSION

To design, manufacture, and deliver reliable, innovative, and sustainable insulation systems that enhance safety, efficiency, and performance in industrial environments across the Middle East.

VISION

Become the first-choice insulation partner for every major industrial project in GCC by combining global expertise with local agility.

CORE VALUES

01 — Quality and Reliability

Every product manufactured by IPS ME is tested and certified according to ASTM and EN standards. Our quality management system guarantees consistent performance, traceability, and long-term reliability.

02 — Sustainability

IPS ME is committed to eco-efficient production. Our processes are designed to minimize waste, optimize energy use, and reduce environmental impact.

03 — Engineering Expertise

IPS ME combines production capabilities with in-depth technical knowledge, offering clients integrated solutions — from material selection to project implementation.

04 — Local Partnership

By producing in the UAE, IPS ME ensures fast project turnaround, supply chain stability, and insulation solutions tailored to the specific conditions and requirements of GCC projects.

We are ready to help you

PRODUCTS

We develop and supply a focused range of industrial insulation products designed for demanding environments and critical infrastructure

Cellular Glass (Foam Glass)

Mineral Wool

Stainless Steel Accessories

Coatings & Ancillaries

SERVICES

IPS Middle East is not just a material supplier — we act as an engineering partner for EPC contractors and industrial operators.

Design & Calculation

Material Selection

Specification Assistance

EPC Project Support

Technical Consultation Service

GLOBAL NETWORK

IPS Group operates as a coordinated international network — ensuring consistent engineering standards and reliable project execution across regions.

United Kingdom — Global engineering expertise, R&D, and strategic coordination

United Arab Emirates — Regional manufacturing hub for GCC markets

India — Production support and component supply

Kazakhstan — Distribution and logistics for Central Asia

STANDARDS

PRODUCTS — IPS Insulation Product Portfolio

01 — Cellular Glass (Foam Glass)

Overview IPS Cellular Glass is a rigid, inorganic insulation material produced from 100% glass. Its closed-cell structure provides total resistance to water, vapor, and most chemicals. Non-combustible and dimensionally stable, cellular glass performs reliably across both cryogenic and high-temperature applications.

Applications

- LNG terminals and cryogenic pipelines (down to -196°C)
- Oil & gas process plants
- Power generation and CHP units
- Petrochemical and chemical processing industries
- Roofing, storage tanks, and industrial foundations

PROPERTY	TEST METHOD	VALUE
SERVICE TEMPERATURE RANGE	—	−196°C TO +450°C
DENSITY	ASTM C303	120 ± 8 KG/M ³
THERMAL CONDUCTIVITY AT 24°C	ASTM C177	0.0417 W/M·K
THERMAL CONDUCTIVITY AT 0°C	ASTM C177	0.036 W/M·K
THERMAL CONDUCTIVITY AT −160°C	ASTM C177	0.023 W/M·K
THERMAL CONDUCTIVITY AT −196°C	ASTM C177	0.019 W/M·K

Properties

Supply Forms

- Standard blocks: 650 × 480 mm
- Slabs, pipe sections, and custom segments
- Thicknesses: 40–180 mm
- Custom fabrication available upon request

Design Guidance

- All joints must be sealed with compatible vapor-barrier mastics
- For stainless steel systems, verify chloride ion content per ASTM C871
- Support loads must be distributed using appropriate bearing structures
- Always use correct adhesives and jacketing materials for the operating temperature range

Installation Notes

- Can be cut on site using standard hand tools
- Handle carefully to avoid edge damage — material is rigid but brittle
- Follow IPS Installation Guidelines and product datasheets

Downloads

- Cellular Glass Technical Data Sheet
- Installation Guidelines
- Request Custom Quotation

02 — Mineral Wool

Overview

IPS Mineral Wool is a high-density insulation material produced from natural basalt rock. It provides superior thermal, fire, and acoustic performance for industrial and building applications across a wide range of operating conditions.

Applications

- High-temperature pipelines and process equipment
- Boilers, turbines, and furnaces
- Fire protection for structural systems and walls
- Acoustic insulation in mechanical systems

PROPERTY	AVAILABILITY
SERVICE TEMPERATURE UP TO 700°C	✓
EXCELLENT FIRE RESISTANCE (NON-COMBUSTIBLE)	✓
WATER-REPELLENT SURFACE	✓
CHEMICALLY INERT AND NON-CORROSIVE	✓
EASY TO INSTALL AND CUT	✓

Properties

Available Forms

- Slabs (boards)
- Wired mats
- Pipe sections

All products comply with ASTM C592 and EN 14303 standards.

03 — Stainless Steel Accessories

Bands, buckles, and clips — AISI 304 / 316 IPS supplies AISI 304 and AISI 316 stainless steel bands, buckles, and clips for securing insulation cladding and protective jacketing in industrial environments. These corrosion-resistant fastening systems are designed for high-temperature applications, offshore humidity, and the aggressive chemical conditions common across GCC facilities.

Studs, washers, and fasteners Precision-manufactured threaded studs, washers, nuts, bolts, and fastening components for industrial insulation and mechanical systems. Produced in AISI 304 and

316 stainless steel, engineered for structural integrity and corrosion resistance in high-temperature and coastal environments.

Brackets, clamps, and spacers A range of stainless steel brackets, pipe clamps, and spacers designed to support insulation systems and pipeline assemblies — maintaining proper spacing, alignment, and load distribution within industrial installations.

Support systems for pipelines and vessels Industrial support assemblies for pipelines, vessels, and process equipment — ensuring safe load distribution and structural stability. Designed to accommodate thermal expansion, vibration, and high operational loads in demanding service conditions.

Features

- Corrosion-resistant for long service life
- Suitable for marine, coastal, and offshore installations
- Easy integration with IPS insulation materials
- Custom fabrication available upon request

Compliance & Standards

All stainless steel components are manufactured in accordance with ASTM A240 and ASTM A276 standards, ensuring certified chemical composition, mechanical strength, and corrosion resistance. **ASTM A240** covers chromium and chromium-nickel stainless steel plate, sheet, and strip for pressure vessels and industrial applications.

ASTM A276 specifies requirements for stainless steel bars and shapes used in structural and mechanical systems.

Compliance with these international standards guarantees material traceability, durability in high-temperature environments, and suitability for refinery, petrochemical, and energy sector applications across the GCC.

04 — Coatings & Ancillaries

Overview

IPS ME provides complementary materials for insulation system integrity and long-term performance. Our coatings, mastics, and adhesives ensure vapor sealing, corrosion protection, and weather resistance.

Product Types

- Protective Coatings: Liquid-applied barriers for metal and non-metal surfaces.
- Mastics & Sealants: For sealing insulation joints and seams.
- Vapor Barrier Sheets: Multi-layer aluminum or polymer membranes.
- Adhesives: High-bond formulations for insulation attachment.
- Jacketing Materials: Aluminum, stainless steel, and composite cladding options.

Applications

Used in combination with IPS Cellular Glass and Mineral Wool systems for complete insulation protection.

HERO

IPS Middle East operates a full-cycle manufacturing hub in Dubai South, UAE
Complete control over raw materials, production, and quality — under one roof, built for the demands of GCC industrial projects.

PRODUCTION PROCESS

How We Make It & How We Control It
From raw materials to finished product, everything happens under one roof. This means consistent quality, faster delivery, and complete traceability for every project.
Our comprehensive quality control programme ensures mechanical stability, fire resistance, and long-term thermal performance — fully aligned with ASTM and EN standards.

01 — Raw Material Selection
High-grade raw materials sourced and verified against specification before production begins

02 — Production
Controlled thermal processing and precision forming under continuous monitoring

03 — Quality Control
Every batch tested to ASTM C552 standards and certified before release

04 — Packaging & Delivery
Securely packed with full documentation, delivered across the GCC within agreed timelines

MANUFACTURING SCOPE

Our Dubai South facility is equipped with automated production systems and precision machinery for manufacturing high-performance insulation materials

Specifications	How we achieve it
650 × 480 MM	FULLY AUTOMATED PRODUCTION
40–180 MM THICKNESS	REAL-TIME DENSITY MONITORING
ASTM C552 COMPLIANT	IN-HOUSE QC LABORATORY
CUSTOM SIZES AVAILABLE	IPS GROUP R&D INTEGRATION

Cellular Glass Insulation

SAFETY & SUSTAINABILITY

IPS Middle East operates in full compliance with UAE environmental regulations and international HSE standards.

Thermal insulation engineered for performance under extreme ambient temperatures

Fire safety and mechanical durability across all product lines

Moisture resistance designed for high-humidity GCC environments

Long-term performance with reduced lifecycle costs

[CONTACT OUR ENGINEER]

CLOSING STATEMENT

The IPS Middle East manufacturing facility in Dubai South represents the future of insulation production in the GCC — combining European precision, regional efficiency, and environmental responsibility to deliver lasting value for every project.

ENGINEERING SERVICES

SERVICE 01 — Design & Calculation

Thermal and Mechanical Design Calculations

Engineering calculations performed to define insulation system configuration based on operating temperature, process parameters, and environmental conditions.

[GET A QUOTE]

AI-POWERED — The process is enhanced by AI-assisted drawing analysis and automated Material Take-Off (MTO) generation, improving accuracy and delivery speed.

Scope of Work

All calculations comply with ASTM, EN, and ISO standards and are tailored to project specifications.

Calculation of insulation thickness based on process parameters and heat transfer rates

Evaluation of condensation risk and surface temperature compliance

Cryogenic and hot system design (LNG, process, and utility systems)

Structural analysis for load-bearing insulation applications

Preparation of technical reports for project documentation

Engineering Process

Input Parameters

01 Thermal & Mechanical Analysis

02 Compliance Verification

03 Technical Report Preparation

04 Design Validation

Deliverables

Insulation thickness calculation report
Heat transfer and surface temperature data
Condensation risk evaluation
Structural assessment summary
Technical documentation package

Standards: ISO · ASTM · EN

SERVICE 02 — Material Selection

Insulation Material Selection and Technical Evaluation

Material selection based on operating parameters, environmental exposure, mechanical requirements, and project standards.

[GET A QUOTE]

Evaluation Criteria

All assessments comply with ASTM, EN, and ISO standards and are tailored to project specifications.

Operating temperature range and process medium

Environmental exposure — humidity, salinity, UV conditions

Corrosion resistance and chemical compatibility

Fire performance classification

Mechanical strength and dimensional stability

Compliance with project and regional standards — ASTM, ADNOC, ARAMCO, etc.

Engineering Process

Operating Conditions Review

01 Environmental & Mechanical Assessment

02 Standards Alignment

03 System Recommendation

Deliverables

Material suitability assessment

Compatibility review

Compliance confirmation

Recommended insulation system configuration

Standards: ISO · ASTM · EN

SERVICE 03 — Specification Assistance

Insulation Specification Development

Support for engineering and EPC teams in preparing insulation specifications and technical documentation for procurement and installation
[GET A QUOTE]

Scope of Work

Scope of specification assistance services includes:

All calculations comply with ASTM, EN, and ISO standards and are tailored to project specifications.

Development of insulation specifications

Alignment with project technical requirements

Preparation of documentation for procurement

Engineering Process

Design Review

01 Specification Drafting

02 Compliance Cross-Reference

03 Documentation Finalisation

Deliverables

Technical datasheets

Compliance documentation

System drawings and application details

Thermal performance tables

Installation and maintenance guidance

Cross-reference with project standards and vendor approvals

Standards: ISO · ASTM · EN

SERVICE 04 — EPC Project Support

EPC Technical Support and Coordination

IPS Middle East acts as a technical partner to EPC contractors during project execution — from early design interface through to on-site inspection and reporting.

[GET A QUOTE]

Scope of Work

Scope of EPC Support

All calculations comply with ASTM, EN, and ISO standards and are tailored to project specifications.

Early-stage design review and system optimisation

Preparation of submittal documentation

Technical clarification during procurement

On-site installation supervision

Inspection support and compliance verification

Performance monitoring and reporting

Engineering Process

Design Interface

01 Submittal Preparation

02 Procurement Clarification

Industry Page 1

Oil & Gas (Onshore / Offshore)

IPS Middle East provides insulation solutions for oil and gas facilities operating under harsh environmental and process conditions.

[get a quote]

Our cellular glass insulation offers:

- Thermal insulation for entire pipes to board-off construction
- Protection against corrosion under insulation (CUI)
- Non-combustibility and dimensional stability
- Up to 70% reduction in lifecycle maintenance costs

Typical applications include:

- Process pipelines and vessels
- Thermal insulation and platforms
- Storage tanks and refineries
- Oil & gas pipeline systems

These properties make IPS insulation systems suitable for both onshore installations and offshore platforms, where safety, durability, and maintenance reduction are critical.

Industry Page 2: LNG & Cryogenic Applications

LNG & Cryogenic Applications

Cryogenic insulation is one of the core application areas for IPS Cellular Glass.
[get a quote]

Operating reliably at temperatures as low as -196°C , cellular glass provides:

- Complete vapor barrier due to closed-cell structure
- Zero capillary water absorption
- Dimensional stability under thermal cooling
- Prevention of ice formation and condensation

Typical applications include:

- LNG terminals and processing units
- LNG storage tanks
- Cryogenic pipelines and valves
- Cold boxes and low-temperature equipment

IPS Middle East insulation systems are designed to support safe and efficient cryogenic operation while maintaining long-term performance and system integrity.

Industry Page 3: Power Generation

Power Generation

IPS Middle East supplies insulation materials for thermal and energy efficiency improvement in power generation facilities.
[get a quote]

Our insulation solutions contribute to:

- Reduction of heat losses
- Improved operational stability
- Fire protection of critical equipment
- Compliance with surface temperature requirements

Typical applications include:

- Turbines and auxiliary equipment
- Balance-of-plant systems
- Boilers and heat recovery systems
- Steam and hot water pipelines

Both cellular glass and mineral wool systems are used depending on operating temperatures and mechanical requirements.

Industry Page 4: Industrial Construction

Industrial Construction

Industrial construction projects require durable and reliable insulation systems capable of performing under continuous operation.

[get a quote]

Our insulation materials support:

- Energy efficiency and process stability
- Fire safety compliance
- Long service life with minimal maintenance
- Compatibility with steel and concrete structures

Typical applications include:

- Refineries and petrochemical plants
- Chemical processing facilities
- Industrial buildings and technical rooms
- Storage and process infrastructure

Local manufacturing allows IPS ME to adapt products and delivery schedules to project timelines and site conditions.

Industry Page 5:

Infrastructure

IPS Middle East insulation systems are also applied in infrastructure and utility projects exposed to demanding climatic conditions.

[get a quote]

Our insulation materials support:

- Thermal insulation under extreme ambient temperatures
- Moisture resistance in high-humidity environments
- Fire safety and mechanical durability
- Long-term performance with reduced lifecycle costs

Typical applications include:

- District cooling and heating networks
- Utility pipelines and tunnels
- Industrial storage facilities
- Specialized infrastructure requiring thermal and fire protection

AVAILABLE DOCUMENTS

1. Technical Datasheets

Detailed performance data and technical characteristics for IPS insulation materials.

Each datasheet includes:

- Physical and mechanical properties
- Thermal performance data
- Compliance with ASTM / EN standards
- Recommended installation and application parameters

Cellular Glass (Foam Glass) — Technical Data Sheet · PDF, 15 MB

Mineral Wool — Product Specification Sheet · PDF, 15 MB

Stainless Steel Accessories — Material Grades & Dimensions · PDF, 15 MB

Coatings & Ancillaries — Product Description & Application Guide · PDF, 15 MB

2. Product Brochures

Comprehensive marketing and technical overviews covering product lines, applications, and benefits. Designed for presentation to engineering teams and project stakeholders.

IPS Middle East Product Portfolio · PDF, 15 MB

Cellular Glass System Overview · PDF, 15 MB

Mineral Wool Insulation Guide · PDF, 15 MB

3. Installation Guidelines

Practical guidance for correct handling and installation of IPS insulation materials. These documents support proper system performance but do not replace project-specific method statements.

Surface preparation and adhesive application · PDF, 15 MB

Joint sealing and vapor barrier installation · PDF, 15 MB

Cutting, handling, and safety precautions · PDF, 15 MB

General installation recommendations · PDF, 15 MB

5. Company Presentation

Corporate presentation introducing IPS Middle East and IPS Group.

Includes:

- Company overview and global structure
- Manufacturing capabilities in Dubai South
- Product range and key applications
- Regional market focus (GCC)

IPS Middle East Presentation · PDF, 15 MB

All documents are available in digital format and comply with international standards for insulation system design and certification.

Our document library ensures that clients, EPC contractors, and project engineers have immediate access to verified technical data, product specifications, and quality certificates — simplifying design approval and project coordination.

The IPS Middle East Documents & Downloads center provides complete transparency and accessibility for all technical and quality documentation. Each file is verified, up to date, and ready for use in design, specification, and procurement processes across the GCC
